

BIOLOGY

Majors:

- Bachelor of Science, Biology (p. 1)
- Bachelor of Science, Environmental Biology (p. 3)

Minor:

- Biology (p. 5)
- Neuroscience (p. 5)
- Research in Biological Sciences (p. 5)

The Bachelor of Science program in biology is designed to prepare a student for a career in the life sciences. Graduates of the program are competitive for entry into graduate programs in the biological sciences as well as professional schools, such as medical, dental, osteopathic, and veterinary science, as well as physician assistant (PA) and advanced nursing programs.

The department has two primary areas of focus:

1. Basic biomedical science
2. Environmental/ecological science

Biomedical science course offerings includes:

- Cell biology
- Comparative and human anatomy
- General and medical microbiology
- Genetics
- Genetics of human disease
- Immunology
- Mammalian physiology
- Neurobiology

Environmental/ecological science course offerings include:

- Community and restoration ecology
- Ecology
- Entomology
- Analysis of biological data
- Environmental ecology
- Applied microbiology
- Evolutionary biology
- Invertebrate and Vertebrate Zoology

In addition, advanced undergraduates may enroll in graduate courses for undergraduate credit with the consent of the department chairperson. In line with the two areas of research interests, the department encourages students (in consultation with their advisors) to declare one of the two as an area of concentration of study no later than the end of their sophomore year. For the student more interested in a broad approach to biology, the department recommends a third option, the general biology

option (any combination of upper-level biology courses that fulfills the program requirements).

The department offers a research mentorship program for upper-level students majoring in biology. The program allows a student to work closely with both faculty and graduate students in laboratory and/or field research. Participation in the program is based on the recommendation of a member of the faculty. The mentorship program is designed to provide a significant advantage for those students who intend to enter a graduate program.

The department also offers an accelerated Bachelor and Master of Science (BPM) program in Biology. This accelerated program offers the opportunity for students to complete the B.S. and M.S. degrees in five years and is designed for students who display strong potential for research in biology. It provides a liberal arts education, a broad background in biology, the development of expertise in a biological subfield, and a thorough introduction to research instrumentation and techniques. Graduates from the program are prepared for either direct entry into the job market or continuation toward the Ph.D.

A minor in biology consists of 20 semester hours.

A minor in neuroscience consists of 19 semester hours.

FACULTY LISTINGS (https://udayton.edu/artsscience/academics/biology/fac_staff/)

Bachelor of Science, Biology (BIO) minimum 120 hours

The Common Academic Program (CAP) is an innovative curriculum that is the foundation of a University of Dayton education. It is a learning experience that is shared in common among all undergraduate students, regardless of their major. Some CAP requirements must be fulfilled by courses taken at UD (e.g., Capstone and Diversity and Social Justice). Some major requirements must also be fulfilled by courses taken at UD. Students should consult with their advisor regarding applicability of transfer credit to fulfill CAP and major program requirements.

Common Academic Program (CAP) ¹

First-Year Humanities Commons ²	12 cr. hrs.
HST 103 Introduction to Global Historical Studies	
REL 103 Introduction to Religious and Theological Studies	
PHL 103 Introduction to Philosophy	
ENG 100 Writing Seminar I ³	
Second-Year Writing Seminar ⁴	0-3 cr. hrs.
ENG 200 Writing Seminar II	
Oral Communication	3 cr. hrs.
CMM 100 Principles of Oral Communication	
Mathematics	3 cr. hrs.

Social Science	3 cr. hrs.	PHY 201 & 201L	College Physics I and College Physics Laboratory I	4
Arts	3 cr. hrs.	PHY 202 & 202L	College Physics II and General Physics Laboratory	4
Natural Sciences ⁵	7 cr. hrs.	Select one mathematics sequence from:		6-8
Crossing Boundaries	up to 12 cr. hrs.	MTH 116 & MTH 148	Precalculus Math and Introductory Calculus I	
Faith Traditions		MTH 148 & MTH 149	Introductory Calculus I and Introductory Calculus II	
Practical Ethical Action		MTH 168 & MTH 169	Analytic Geometry & Calculus I and Analytic Geometry & Calculus II	
Inquiry		Major Requirements ^{1, 6}		44
Integrative		BIO 151 & 151L	Concepts of Biology I: Cellular & Molecular Biology and Concepts of Biology Laboratory I: Cellular & Molecular Biology	4
Advanced Study		BIO 152 & 152L	Concepts of Biology II: Evolution & Ecology and Concepts of Biology Laboratory II: Evolution & Ecology	4
Philosophy and/or Religious Studies (6 cr. hrs.)		BIO 299	Biology Seminar	1
Historical Studies (3 cr. hrs.) ⁶		BIO 310	Ecology	3
Diversity and Social Justice ⁷	3 cr. hrs.	BIO 312	General Genetics	3
Major Capstone ⁸	0-6 cr. hrs.	BIO 420	Biology Capstone Seminar (Satisfies Cap Major Capstone)	1
		Select two environmental/ecological courses from: ^{2, 6}		7
		BIO 207L	Trees of Ohio	
		BIO 301 & 301L	Evolution and Evolution Laboratory	
		BIO 309 & 309L	Comparative Anatomy of the Vertebrates and Comparative Anatomy Laboratory	
		BIO 310L	Ecology Laboratory	
		BIO 311	Introductory Entomology	
		BIO 312L	Genetics Laboratory	
		BIO 314 & 314L	Plant Biology and Plant Biology Laboratory	
		BIO 320 & 320L	Marine Biology and Marine Biology Laboratory	
		BIO 350	Applied and Environmental Microbiology	
		BIO 359	Sustainability & the Biosphere	
		BIO 370	Conservation Biology	
		BIO 402 & 402L	Vertebrate Zoology and Vertebrate Zoology Laboratory	
		BIO 407 & 407L	Plant Diversity & Ecology and Plant Diversity & Ecology Laboratory	
		BIO 409 & 409L	Ecological Restoration and Ecological Restoration Laboratory	
		BIO 411 & 411L	General Microbiology and General Microbiology Laboratory	
		BIO 421	Biological Problems ⁴	
		BIO 426 & 426L	Herpetology and Herpetology Laboratory	
		BIO 435 & 435L	Microbial Ecology and Microbial Ecology Laboratory	
		BIO 439	Analysis & Interpretation of Biological Data	
		BIO 445	Evolution & Development	

¹ The credit hours listed reflect what is needed to complete each CAP component. However, they should not be viewed as a cumulative addition to a student's degree requirements because many CAP courses are designed to satisfy more than one CAP component (e.g., Crossing Boundaries and Advanced Studies) and may also satisfy requirements in the student's major.

² May be completed with ASI 110 and ASI 120 through the Core Program.

³ May be completed with ENG 100A and ENG 100B, by placement.

⁴ May be completed with ENG 114 or ENG 198 or ASI 120.

⁵ Must include two different disciplines and at least one accompanying lab.

⁶ May be completed with ASI 110 and ASI 120 through the Core Program.

⁷ May not double count with First-Year Humanities Commons, Second-Year Writing, Oral Communication, Social Science, Arts, or Natural Sciences CAP components, but may double count with courses taken to satisfy other CAP components and/or courses taken in the student's major.

⁸ The course or experience is designed by faculty in each major; it may, or may not, be assigned credit hours.

Social & Behavioral Sciences (includes CAP Social Science)		6
Total Hours to total at least		120

¹ The Department of Biology supports national standards established by the National Institutes of Health for the responsible, humane treatment and housing of animals. The biology curriculum contains some laboratory courses in which dissection and vivisection are necessary and required in order to convey an understanding of certain biological concepts. All students are expected to participate in such laboratory exercises in the introductory biology sequence, BIO 151L and BIO 152L which involve dissection and/or vivisection. In other elective formal laboratory courses in which dissection and vivisection occur, it is expected that students will participate in all aspects of the laboratory. No alternatives to dissection or vivisection will be offered in these courses. It is ultimately the responsibility of students to make certain that they enroll in courses in which they are able to participate in all required exercises, and to obtain information from each instructor as to the specific laboratory course content and requirements. The Department of Biology maintains an updated list of laboratory courses in which dissection and/or vivisection is required in order to assist students in the selection of course work.

² One with accompanying laboratory.

³ One with accompanying laboratory. BIO 462 strongly recommended as one of two courses.

⁴ By permission only. Qualifies as a laboratory elective for any category.

⁵ One of the following Non-BIO science courses may include: CHM 201, CHM 302, CHM 303, CHM 420, MTH 367, CPS 107, CPS 111, CPS 132, GEO 2. Non-BIO science courses may be included with the approval of the chairperson.

⁶ A minimum grade of C- is required.

⁷ HST 340, HST 341 or HST 342 are highly recommended.

Bachelor of Science, Environmental Biology (EVB) minimum 120 hours

Environmental biology is a science specialization based upon the fundamentals of biology and ecology, applying interdisciplinary skills, knowledge, and principles to the environmental problems facing society today. Students entering this dynamic field could become directly involved in addressing some of the significant global problems related to human impact on the environment. In addition to the standard base of courses required of most biology majors, the curriculum also requires a challenging core of environmentally related science courses and course work drawn from a multidisciplinary elective pool that includes offerings in the humanities and social sciences.

Internship Program: Majors will participate in the EVB internship program (BIO 499, see course prerequisites), where they will have the unique opportunity to obtain valuable training and experience under the mentorship of established scientists and other environmental professionals.

The Common Academic Program (CAP) is an innovative curriculum that is the foundation of a University of Dayton education. It is a learning experience that is shared in common among all undergraduate students, regardless of their major. Some CAP requirements must be fulfilled by

courses taken at UD (e.g., Capstone and Diversity and Social Justice). Some major requirements must also be fulfilled by courses taken at UD. Students should consult with their advisor regarding applicability of transfer credit to fulfill CAP and major program requirements.

Common Academic Program (CAP) ¹

First-Year Humanities Commons ²	12	cr.	hrs.

Minor in Neuroscience (NSC)

The Neuroscience minor is designed for students with academic and/or professional interests in the field of Neuroscience. Upon completion of the Neuroscience minor students will: i) gain strong foundational knowledge of the biological functions of the nervous system and its relationship to behavior and brain disorders; ii) demonstrate knowledge of the grand challenges and questions facing modern experimental neuroscience; and iii) develop an appreciation of the interdisciplinary nature of this fascinating scientific field. The Neuroscience minor is housed in the Biology Department. Students can earn this minor by completing two core Neuroscience courses, introductory Psychology, two upper-level Biomedical elective courses and two upper-level Psychology elective courses from the course list below for a total of 19 credit hours. Students who wish to minor in Neuroscience should contact the Neuroscience Minor Coordinator.

Required Courses ^{1,2}

BIO 415	Neurobiology	3
BIO 415L	Neurobiology Laboratory	1
or BIO 416	Neuroscience Seminar	
PSY 101	Introductory Psychology	3
Select two Biomedical courses from the following: ^{1,2,3}		6
BIO 403	Physiology I	
or HSS 307	Human Physiology	
BIO 404	Physiology II	
BIO 411	General Microbiology	
BIO 412	Genetics Human Diseases	
BIO 417	Neurobiology of Disease	

BIO 427	Immunology	
BIO 439	Analysis & Interpretation of Biological Data	
BIO 440	Cell Biology	
BIO 445	Evolution & Development	
BIO 442	Developmental Biology	
BIO 462	Molecular Biology	
BIO 475	Human Anatomy	
or HSS 305	Human Anatomy	
CHM 420	Biochemistry	
or CHM 451	General Biochemistry I	
or CHM 452	General Biochemistry II	
Select two Psychology courses from the following: ^{1,3}		6
PSY 321	Cognition	
PSY 322	Learning	
PSY 323	Psychology of Perception	
PSY 355	Developmental Psychopathology	
PSY 363	Abnormal Psychology	
PSY 422	Biopsychology	

Total Hours **19**

¹ Students who wish to minor in Neuroscience should contact the Neuroscience Minor Coordinator.

² A minimum grade of a C- is required for all Biology (BIO) courses in the minor.

³ Additional courses may be approved by the Neuroscience Minor Coordinator.

Minor in Research in Biological Sciences (BIR)

Research in the Biological Sciences is a minor for students with academic and/or professional interest that can be advanced by research-focused coursework and through extensive faculty-mentored scientific research in biology. Students completing the Research in Biological Sciences minor will: i) gain strong foundational knowledge of the practice of scientific research in the Biological Sciences; ii) become adept in the consumption and discussion of contemporary biological research, iii) develop an appreciation of the interdisciplinary nature of scientific research in Biology, and iv) demonstrate the ability to translate knowledge acquired in the research lab to the public through professional presentation and/or scientific writing. The Research in the Biological Sciences minor is housed in the Biology Department. Students can earn this minor by completing required and elective coursework and completing a research project mentored by a Biology Department faculty member.

To complete this minor, 12 credits are required in addition to a student's major degree program(s). The student must complete four credits in BIO 422, three credits in BIO 300, and one credit in BIO 421. These will typically be taken as one credit hour offerings in different semesters over the student's Junior and Senior years. For example, the student may enroll in their faculty mentor's section of BIO 422 (1 cr) and 300 (1 cr) in the fall of their Junior year, spring of Junior year, and fall of Senior year, then enroll in BIO 422 (1 cr) and BIO 421 (1 cr) in the spring of their Senior year. The minor does not exclude other arrangements of credits (e.g., for credit summer offerings). In addition, the student must complete one upper division elective lecture in BIO and one upper division elective lab in

BIO that must be in addition to the requirements of the degree program. Students must complete prerequisites for all courses.

Required Courses

BIO 422	Biological Problems	Repeat to earn 4 credits	1-2
BIO 300	Research Experience in Biology	Repeat to earn 3 credits	0-1
BIO 421	Biological Problems		1

Select one 400-level Biology lecture course from:

BIO 402	Vertebrate Zoology	3
BIO 403	Physiology I	3
BIO 404	Physiology II	3
BIO 407	Plant Diversity & Ecology	3
BIO 409	Ecological Restoration	3
BIO 411	General Microbiology	3
BIO 412	Genetics Human Diseases	3
BIO 414	Virology	3
BIO 415	Neurobiology	3
BIO 417	Neurobiology of Disease	3
BIO 426	Herpetology	3
BIO 427	Immunology	3
BIO 439	Analysis & Interpretation of Biological Data	3
BIO 440	Cell Biology	3
BIO 442	Developmental Biology	3
BIO 445	Evolution & Development	3
BIO 452	Biology of Rivers & Lakes	3
BIO 459	Environmental Ecology	3
BIO 461	Invertebrate Zoology	3
BIO 462	Molecular Biology	3
BIO 466	Biology of Infectious Disease	3
BIO 470	Cancer Biology	3
BIO 475	Human Anatomy	3
BIO 480	Principles of Microscopy	3

Select one 400-level Biology laboratory course from:

BIO 402L	Vertebrate Zoology Laboratory	1
BIO 403L	Physiology Laboratory I	1
BIO 407L	Plant Diversity & Ecology Laboratory	1
BIO 409L	Ecological Restoration Laboratory	1
BIO 411L	General Microbiology Laboratory	1
BIO 415L	Neurobiology Laboratory	1
BIO 425L	Parasitology Laboratory	1
BIO 426L	Herpetology Laboratory	1
BIO 427L	Immunology Laboratory	1
BIO 440L	Cell Biology Laboratory	1
BIO 442L	Developmental Biology Laboratory	1

Courses

BIO 101. Life, Environment, and Society. 3 Hours

An introductory course covering the study of life in all its forms, understanding how life interacts with the environment and the role of biological inquiry in society. Emphasis will be placed on discussing topical issues relevant to evaluating the critical role of the life sciences in society today. Supporting laboratory strongly recommended, but optional. No prerequisite. For non-science majors only.

BIO 101L. Life, Environment, and Society Laboratory. 1 Hour

A hands-on approach to the study of life, understanding how life interacts with the environment, and the role of biological inquiry in society. Lab activities will stress an experiential, inquiry-based approach to topics relevant in today's society in an effort to increase student's abilities to critically evaluate modern science media. Laboratory topics are designed to run parallel to lecture topics. Recommended that the laboratory be taken concurrently with BIO 101 lecture. One two-hour laboratory per week. For non-science majors. Corequisite(s): BIO 101.

BIO 151. Concepts of Biology I: Cellular & Molecular Biology. 3 Hours

Introduction to the biological concepts surrounding cell and molecular biology. Topics include scientific practice, molecular basis of life, cellular composition and energy processes, genetics, and biotechnology. Intended for science majors. Core biology course.

BIO 151L. Concepts of Biology Laboratory I: Cellular & Molecular Biology. 1 Hour

Laboratory-based introduction to the biological concepts surrounding cell and molecular biology. Utilizing a hands-on approach to the study of life, students will take part in experiential, inquiry-based activities as they observe the properties of cellular, micro-scale biology while concurrently defining proper laboratory procedures, operating modern scientific instrumentation, and practicing effective documentation of experiments. Topics include scientific practice, biological instrumentation, cellular composition and processes, genetics, and biotechnology. One three-hour lab per week. Intended for science majors. Core biology course. Corequisite(s): BIO 151.

BIO 152. Concepts of Biology II: Evolution & Ecology. 3 Hours

Introduction to the biological concepts surrounding evolution and ecology. Topics include scientific practice, evolutionary basis of life, phylogeny and systematics, biodiversity, ecology and biosphere sustainability. Intended for science majors. Core biology course.

BIO 152L. Concepts of Biology Laboratory II: Evolution & Ecology. 1 Hour

Laboratory-based introduction to the biological concepts surrounding evolution, diversity and ecology. Utilizing a hands-on approach, students will take part in experiential, inquiry-based activities as they explore the concepts of evolution and macro-scale biology while concurrently developing proper laboratory procedures, operating modern scientific instrumentation, and practicing effective scientific presentation of research through the two most widely accepted formats: the scientific journal article and the research poster presentation. Topics include evolution and phylogeny, the diversity of life, ecology, and human impact on ecosystems. One three-hour laboratory per week. Intended for science majors. Core biology course. Corequisite(s): BIO 152.

BIO 15F. Science Major Biology Unaligned - First Semester. 0-5 Hours

BIO 15FL. SCI MJR Bio Lab Unaligned 1st. 1-2 Hours

BIO 15S. Science Major Biology Unaligned - Second Semester. 1-5 Hours

BIO 15SL. Science Major Biology Lab Unaligned - Second Semester. 1-5 Hours

BIO 207L. Trees of Ohio. 1 Hour

A practical laboratory of dendrology. Taxonomy and ecology of woody plants of Ohio with an emphasis on identification skills. Field trips to encounter various species and habitats, taxonomic and botanical terminology, working with a dichotomous key and laboratory exercises will be blended together. Prerequisites: BIO 152; BIO152L.

BIO 299. Biology Seminar. 1 Hour

Introduction to biological journals and abstracting materials. Practice in reviewing, abstracting, and presenting biological information, and career development. Core biology course. Biology and environmental biology majors only. Prerequisite(s): BIO 152.

BIO 300. Research Experience in Biology. 0-1 Hours

In this course, students will engage in faculty mentored experiential learning in Biology. These experiences may be related to biology research activity in a field or laboratory setting and course outcomes will be assessed through a reflection following the experience.

BIO 301. Evolution. 3 Hours

Theory and evidence of organic evolution, with emphasis on microevolutionary change and population genetics. Prerequisite(s): BIO 152.

BIO 301L. Evolution Laboratory. 1 Hour

A laboratory research experience in evolution with emphasis on phylogenetic reconstruction and natural selection. Prerequisites: BIO 152. Corequisites: BIO 301.

BIO 309. Comparative Anatomy of the Vertebrates. 3 Hours

Study of changes that have occurred in the vertebrate body with the passage of time, and analysis of their significance. Prerequisite(s): BIO 152.

BIO 309L. Comparative Anatomy Laboratory. 1 Hour

Dissection and study of the anatomical structure of representative vertebrate animals. One three-hour laboratory per week. Corequisite(s): BIO 309.

BIO 310. Ecology. 3 Hours

Interrelationship of plants, animals, and micro-organisms with the physical-chemical environment: nutrient cycles, energy flow, ecosystems, and factors affecting distribution and abundance of organisms. Core biology course. Prerequisite(s): BIO 152.

BIO 310L. Ecology Laboratory. 1 Hour

Measurement of population, community, and environmental variables in terrestrial and aquatic systems. The lab is field-based using local ecological resources. One three-hour laboratory per week and weekend field trips. Corequisite(s): BIO 310.

BIO 311. Introductory Entomology. 3 Hours

Classification, physiology, ecology, and impact of insects on society. Prerequisite(s): BIO 152.

BIO 312. General Genetics. 3 Hours

Study of the principles of variation and heredity covering both Mendelian and molecular genetics. Core biology course. Prerequisite(s): BIO 152.

BIO 312L. Genetics Laboratory. 1 Hour

Exploration of heredity using molecular genetic methods. One three-hour laboratory per week. Corequisite(s): BIO 312.

BIO 314. Plant Biology. 3 Hours

Consideration of structure, function, reproduction, and inheritance as applicable in the plant patterns of life. Emphasis on the vascular plants. Prerequisite(s): BIO 152.

BIO 314L. Plant Biology Laboratory. 1 Hour

Emphasis on generalized structure and function of plants. One three-hour laboratory per week. Corequisite(s): BIO 314.

BIO 320. Marine Biology. 3 Hours

Introduction to the physical, chemical, and biological components of the marine environment with emphasis on ecology, biodiversity, ecosystem function, and conservation of marine resources. Prerequisites: BIO 151, BIO 152, BIO 310.

BIO 320L. Marine Biology Laboratory. 2 Hours

Examination of marine organisms and processes. Laboratory work conducted on UD campus and at off-campus field sites in the southern United States or Hawaii. Prerequisite(s): Permission of instructor. Corequisite(s): BIO 320.

BIO 330. Animal Behavior. 3 Hours

An evolutionary approach to the study of animal behavior, emphasizing both proximate mechanisms and functional explanations of the survival value of behavior. Prerequisite(s): BIO 152.

BIO 330L. Animal Behavior Laboratory. 1 Hour

Analysis of animal behavior using various animal models. One three-hour laboratory per week and occasional Saturday field trips. Corequisite(s): BIO 330.

BIO 350. Applied and Environmental Microbiology. 3 Hours

This course covers the fundamentals of applied and environmental microbiology, such as the production of fine and commodity chemicals, agriculture and food manufacturing, bioremediation of wastes and toxic chemicals, as well as other relevant topics in the applications of microbes for human and societal benefits. Prerequisites: BIO 151; BIO 152; CHM 124.

BIO 359. Sustainability & the Biosphere. 3 Hours

Study of the principles of sustainability. All areas of sustainability will be covered with emphasis on ecological facets of sustainability. Discussion of loss of habitat and biodiversity in the context of sustaining natural resources for future generations. Prerequisite(s): BIO 152 or SCI 230.

BIO 362. Bioessentialism and Constructions of Bodies. 3 Hours

Study of bodies from an essentialist and bio-psychosocial models, as well as culturally informed and historical perspectives. Examines the historical and cultural impact on biological processes and identity formation. Through an intersectional lens, examines power dynamics impacting inclusion and exclusion in dominant structures. Prerequisites: Sophomore standing or higher.

BIO 370. Conservation Biology. 3 Hours

An ecosystem approach to the study of and threat to local, regional, and global biodiversity. Application of ecological principles of conservation of species and habitats. Prerequisite(s): BIO 152.

BIO 395. Global Environmental Biology. 3 Hours

Presentation of the biological and ecological principles needed for the critical discussion and evaluation of current global issues related to human impact on the environment. Ecological data on the current extinction crisis and sustainable solutions will be addressed. No credit toward a biology major or minor. Prerequisite(s): BIO 101, BIO 151 or SCI 230.

BIO 402. Vertebrate Zoology. 3 Hours

The morphology, physiology, ecology, and distribution of representative vertebrate groups. Prerequisite(s): BIO 310 or BIO 312.

BIO 402L. Vertebrate Zoology Laboratory. 1 Hour

Laboratory focused on the diversity, systematics and ecology of vertebrates. One three-hour laboratory per week. Corequisite(s): BIO 402.

BIO 403. Physiology I. 3 Hours

Physical-chemical examination of the physiological events occurring in a living system with emphasis on physiology of the cell, excretion, nerves, muscles, bone, blood, heart, circulation, and respiration. Prerequisite(s): BIO 152; CHM 314.

BIO 403L. Physiology Laboratory I. 1 Hour

Systematic approach to the acquisition and interpretation of information about the physiology of living systems. One three-hour laboratory per week. Corequisite(s): BIO 403 or HSS 307.

BIO 404. Physiology II. 3 Hours

Integrated systems based examination of physiological processes in humans with a special emphasis on molecular mechanisms of pathophysiological conditions in humans and experimental animal systems. Prerequisite(s): BIO 403.

BIO 407. Plant Diversity & Ecology. 3 Hours

Lecture course addressing plant diversity and ecology. Course includes an overview of plant systematics and aspects of plant anatomy, population ecology, community ecology, ecosystem ecology, and global ecology. Prerequisite(s): BIO 310.

BIO 407L. Plant Diversity & Ecology Laboratory. 1 Hour

Field laboratory course addressing plant diversity and ecology. Includes a series of field labs focused on plant identification, followed by labs focused on quantitatively assessing plants, plant communities, and ecosystems. Labs will take place in a variety of natural areas. Corequisite(s): BIO 407.

BIO 409. Ecological Restoration. 3 Hours

Principles and practices of ecological restoration. The course presents the rationale and knowledge needed to understand, appreciate, plan and perform ecological restoration. Prerequisite(s): BIO 310.

BIO 409L. Ecological Restoration Laboratory. 1 Hour

Practical applications of the principles of ecological restoration to a variety of ecosystems. One three-hour laboratory per week. Corequisite(s): BIO 409.

BIO 411. General Microbiology. 3 Hours

Introductory course stressing the physiology, cultivation, and classification of microbial organisms; their role in medicine, agriculture, and industry. Prerequisite(s): BIO 152; CHM 313.

BIO 411L. General Microbiology Laboratory. 1 Hour

Lab exercises focusing on the basic techniques involved in the isolation and identification of bacteria, including assessment of biochemical activities, growth characteristics of bacteria, and the impact of the environment on microbial growth. One three-hour laboratory per week. Corequisite(s): BIO 411.

BIO 412. Genetics Human Diseases. 3 Hours

Study of the molecular genetics of inherited human diseases using a systems approach. Survey of inherited diseases linked to major organs and organ systems. Prerequisite(s): BIO 312; CHM 313.

BIO 414. Virology. 3 Hours

This course is designed to enhance students' understanding of virology, with special emphasis on human and animal viruses, their structure, genetic make-up, strategies of virus replication, and their classification. This course will also cover the mechanism of viral pathogenesis and strategies to control and prevent viral diseases. Prerequisite(s): BIO 411.

BIO 415. Neurobiology. 3 Hours

Structure and function of the brain and nervous system. Emphasis on understanding cellular and molecular events within the nervous system using model organisms. Prerequisite(s): BIO 152; CHM 124.

BIO 415L. Neurobiology Laboratory. 1 Hour

Laboratory research experience in neuroscience with emphasis on cellular, molecular and behavioral neurobiology and neurochemistry. Prerequisite(s): BIO 152, BIO 415 (may be taken as a co-req), CHM 124.

BIO 416. Neuroscience Seminar. 1 Hour

Advanced seminar focusing on major topics in the field of Neuroscience and emphasizing the critical analysis of experimental approaches and research findings. Prerequisite(s): BIO 415 (may be taken as a co-req).

BIO 417. Neurobiology of Disease. 3 Hours

An advanced neuroscience course focusing on the pathogenetic neurobiological mechanisms underlying major neuropsychiatric, neurodevelopmental, and neurodegenerative disorders, and their pharmacotherapeutic treatments. Prerequisite(s): BIO 415.

BIO 420. Biology Capstone Seminar. 1 Hour

Seminar course designed to further develop students' ability to communicate and synthesize within their discipline and prepare them for their chosen career paths in the Biological and Environmental professions. All class activities, including presentations, relate to key issues facing society today in addition to continued career development skills. Biology core and capstone course. Prerequisite(s): BIO 299, BIO 310, BIO 312.

BIO 421. Biological Problems. 1-2 Hours

Laboratory research problems. Topics arranged with faculty advisors. Prerequisite(s): (BIO 310 or BIO 312); Permission of department chairperson.

BIO 422. Biological Problems. 1-2 Hours

Library research problems. Topics arranged with faculty advisors. Prerequisite(s): (BIO 310 or BIO 312); Permission of department chairperson.

BIO 426. Herpetology. 3 Hours

An overview of the biology of amphibians and reptiles with emphasis on biodiversity, ecology, evolution, morphology, physiology, behavior, and conservation. Prerequisite(s): BIO 310.

BIO 426L. Herpetology Laboratory. 1 Hour

Laboratory focused on the diversity, morphology, and ecology of amphibians and reptiles. One three-hour laboratory per week. Prerequisite(s): BIO 310 AND BIO 310L AND BIO 426 (BIO 426 may be taken as a co-req).

BIO 427. Immunology. 3 Hours

Discussions of antigens, antibodies, antigenicity, immunogenicity, and antigen-antibody reactions including hypersensitivity, immune tolerance, and transplants. Prerequisite(s): (BIO 403 or BIO 411 or BIO 440 or BIO 442) or CHM 420.

BIO 427L. Immunology Laboratory. 1 Hour

This laboratory course aims to provide students with hands-on experience in immunological techniques, including preparing sub-unit vaccines, troubleshooting the assays, and interpreting the results by critical analysis. Prerequisite: BIO 427 (may be taken as a co-req).

BIO 435. Microbial Ecology. 3 Hours

Study of the diversity and activity of microorganisms and the interrelationships between microorganisms and their environments with emphasis on aquatic ecosystems. Prerequisite(s): BIO 411; CHM 314.

BIO 435L. Microbial Ecology Laboratory. 1 Hour

Examination of the methods of isolation and enumeration of microorganisms and techniques for determining their activities in the field and laboratory. One three-hour laboratory per week. Corequisite(s): BIO 435.

BIO 439. Analysis & Interpretation of Biological Data. 3 Hours

Introducing the nature of some of the important types of data that are generated in biological research, the databases that warehouse such data, the principles involved in the analysis of such data, the use of appropriate software to analyze such data, and the biological interpretation of the results of analysis. Prerequisite(s): BIO 152.

BIO 440. Cell Biology. 3 Hours

Study of the function, structure, composition, heredity, and growth of cells. Analysis of cell concepts in biochemical terms. Prerequisite(s): BIO 152; CHM 314.

BIO 440L. Cell Biology Laboratory. 1 Hour

Experimental approaches to explore modern concepts in cell structure, function, and biology. One three-hour laboratory per week. Corequisite(s): BIO 440.

BIO 442. Developmental Biology. 3 Hours

Study of animal development, including morphological patterns of development, mechanisms of cellular differentiation, cell-cell interactions during development, and mechanisms of differential gene expression. Emphasis on understanding development at the cellular and molecular levels. Prerequisite(s): BIO 152; CHM 314.

BIO 442L. Developmental Biology Laboratory. 1 Hour

Exploration of the development of key model organisms from the morphological and molecular perspectives with an emphasis on basic developmental laboratory techniques. One three-hour laboratory per week. Corequisite(s): BIO 442.

BIO 445. Evolution & Development. 3 Hours

Molecular and population genetic examination of the evolution of animal form. Topics include comparative developmental biology, population genetics, and molecular evolution. Prerequisite(s): BIO 312.

BIO 450. Comparative Animal Physiology. 3 Hours

Organized on a function-system basis, course dealing with environment-organism interaction and with integrative systems of the principle phyla of animals. Prerequisite(s): (BIO 310 or BIO 312); CHM 124.

BIO 450L. Comparative Animal Physiology Laboratory. 1 Hour

Examination of physiological responses to the physical environment. Variations of the physical environment are examined in the field. Study of animals under controlled laboratory conditions with experimental design, data collection and analysis to assess physiological adaptations. One three-hour laboratory or field trip per week. Corequisite(s): BIO 450.

BIO 452. Biology of Rivers & Lakes. 3 Hours

The biological interrelationships of organisms in rivers, streams, lakes and ponds including biodiversity, ecological/evolutionary adaptations and structure of aquatic ecosystems. Prerequisite(s): BIO 310.

BIO 452L. Biology of Rivers & Lakes Laboratory. 1 Hour

Laboratory and field exercises emphasizing the biological, chemical and physical attributes of freshwater ecological systems. One three-hour laboratory or field trip per week. Corequisite(s): BIO 452.

BIO 459. Environmental Ecology. 3 Hours

The application of current ecological knowledge and principles toward the study of human impact on the environment. Emphasis on ecosystem dynamics, applied ecology, disturbance ecology, and approaches to solving global environmental problems. Prerequisite(s): BIO 310.

BIO 459L. Environmental Ecology Laboratory. 1 Hour

Analytical approach to studying applied ecology and human impact on the environment. Emphasis on laboratory and field approaches to solving environmental problems through the use of ecological principles. One three-hour laboratory per week. Corequisite(s): BIO 459.

BIO 461. Invertebrate Zoology. 3 Hours

Survey of the structure, activities, life histories, and relationships of the invertebrate animals, with some emphasis on their origin and development. Prerequisite(s): BIO 310 or BIO 312.

BIO 461L. Invertebrate Zoology Laboratory. 1 Hour

Examination of the structure and function of the major invertebrate phyla. Survey of representative animals with an emphasis on observational skills for analysis of the structural adaptations of live animals. One three-hour laboratory per week. Corequisite(s): BIO 461.

BIO 462. Molecular Biology. 3 Hours

Analysis of the nature of the gene and gene action. Particular attention to genetic regulation and to recent advances in molecular genetics. Prerequisite(s): BIO 312; CHM 314.

BIO 466. Biology of Infectious Disease. 3 Hours

The nature of infectious diseases, host-parasite relationships in resistance and infection, defense mechanism (antigen-antibody response); survey of the bacteria causing disease in humans. Prerequisite(s): BIO 411.

BIO 470. Cancer Biology. 3 Hours

Study of growth patterns and causes of cancer at the cellular and molecular levels. Discussion of the hereditary and environmental factors that contribute to the development of the disease in cancer patients. Description of the research being conducted to understand and cure the disease. Prerequisites: BIO 312, CHM 313. Corequisites: BIO 403 or BIO 415 or BIO 440 or BIO 442.

BIO 475. Human Anatomy. 3 Hours

Study of the fundamental principles of human gross anatomy with emphasis on all organ systems. Prerequisite(s): BIO 152; CHM 314.

BIO 475L. Human Anatomy Laboratory. 1 Hour

Study of human gross anatomy emphasizing all organs systems using computer-assisted dissection, anatomical human models and occasional dissection of nonhuman cadaver organs. One three-hour laboratory per week. Corequisite(s): BIO 475.

BIO 477. Honors Thesis Project. 3 Hours

First of two courses leading to the selection, design, investigation, and completion of an independent, original Honors Thesis project under the guidance of a faculty research advisor. Restricted to students in the University Honors Program with permission of the program director and department chairperson. Students pursuing an interdisciplinary thesis topic may register for three semester hours each in two separate disciplines in consultation with the department chairpersons. Prerequisite(s): Approval of University Honors Program.

BIO 478. Honors Thesis Project. 3 Hours

Second of two courses leading to the selection, design, investigation, and completion of an independent, original Honors Thesis project under the guidance of a faculty research advisor. Restricted to students in the University Honors Program with permission of the program director and department chairperson. Students pursuing an interdisciplinary thesis topic may register for three semester hours each in two separate disciplines in consultation with the department chairpersons. Prerequisite(s): Approved 477; approval of University Honors Program.

BIO 479L. Environmental Instrumentation Laboratory. 2 Hours

The understanding and use of field- and laboratory-based equipment to study current environmental issues. Emphasis on team-centered approaches to investigating environmental problems. Same as GEO 479L. One five-hour laboratory or field trip per week. Prerequisite(s): BIO 310; GEO 116.

BIO 480. Principles of Microscopy. 3 Hours

Focus on basic principles and theory of light and electron microscopy, and how these techniques address fundamental questions in science. Prerequisite(s): BIO 152.

BIO 480L. Principles of Microscopy Laboratory. 1 Hour

Application and practice of light and electron microscopy. One three-hour laboratory per week. Corequisite(s): BIO 480.

BIO 489. Mycology. 3 Hours

Introductory course stressing the interrelationship between fungi and the rest of the biological world. Emphasis on the basic biology and ecology of fungi, decomposition, species interactions, plant pathology and medical mycology. Prerequisite(s): BIO 152.

BIO 496. Special Topics in Biology. 1-3 Hours

Lecture course addressing advanced topics in biology. Topics are variable depending on faculty teaching the course and the course aims. Students should consult the class schedule. May be repeated. Prerequisite(s): BIO 151, BIO 152.

BIO 496L. Special Topics Laboratory in Biology. 1 Hour

Laboratory course addressing advanced topics in biology. Topics are variable depending on faculty teaching the course and the course aims. Students should consult the class schedule. May be repeated. Prerequisites: BIO 151L, BIO 152L.

BIO 499. Environmental Biology Internship. 3 Hours

Majors will have the opportunity to obtain valuable training and experience under the mentorship of established scientists and professionals. Emphasis on approaches to solving environmental problems including such research areas as bioremediation, risk assessment, and ecological restoration. May be repeated up to six semester hours. No science credit for biology majors. Prerequisite(s): Permission of Environmental Biology Program Coordinator.
