

# ELECTRICAL AND COMPUTER ENGINEERING

---

## Majors:

- Bachelor of Electrical Engineering (p. 2)
- Bachelor of Science in Computer Engineering (p. 3)

## Concentrations:

- Electrical Energy Systems (p. 4)
- Electro-Optics (p. 4)
- Robotics (p. 4)

## Minors:

- Computer Systems (p. 5)
- Signals and Systems (p. 5)

The Department of Electrical and Computer Engineering offers two ABET accredited undergraduate programs leading to the Bachelor of Electrical Engineering and the Bachelor of Science in Computer Engineering.

The department offers masters and doctoral degrees in electrical and computer engineering and is closely coupled to the graduate program in electro-optics where both master's and doctoral degrees are offered. The electrical and computer engineering department offers an accelerated 5 year B.S.-M.S. program, where students completing their baccalaureate degree can attain their Master of Science in Electrical Engineering or Computer Engineering within one additional year. The department also offers an undergraduate concentration in electro-optics, in collaboration with the Physics Department and the Department of Electro-Optics and Photonics, as well as a concentration in Robotics, and a concentration in Electrical Energy Systems.

The mission of the Department of Electrical and Computer Engineering is to provide an educational experience of the highest quality to produce the discipline's most valued graduates, with the skills and knowledge to learn, lead, and serve in electrical and computer engineering related professions and in their communities.

Our electrical engineering and computer engineering graduates will be prepared to:

1. find rewarding careers as engineering professionals. As electrical engineers they will be prepared to design and develop new products, technologies, and processes that incorporate one or more of the following elements: analog and digital circuits, signals and systems, propagation and processing of signals, and control systems. As computer engineers they will be prepared to design and develop new products, technologies, and processes that incorporate one or more of the following elements: analog and digital circuits, signals and systems, computer design, software development, and hardware/software integration.
2. continue their professional education either formally, in graduate school, professional schools, or through industrial training programs; or informally, through activities such as continuing education, attendance in short courses, professional workshops, and conferences.
3. exercise and further develop their skills in professional communication through activities such as project briefings,

conference presentations, technical reports and manuals, and journal publications.

4. participate in activities for the betterment of society, and carry on the traditions of the University of Dayton by maintaining high ethical standards in their professional activities, and by serving their country and community through service, leadership and mentoring.

Electrical engineering is an exciting field within the engineering discipline. It offers the opportunity to enter some of the most rewarding and challenging careers available. The latest developments in the computer, communication, automotive, medical, entertainment, and aerospace industries, as well as homeland security have resulted from advances in the electronics field. Electrical engineers are equipped to enter this dynamic arena as well as equally challenging and rewarding careers in the fields of electro-optics, communication, radar, signal and image processing, biomedicine, controls, robotics and instrumentation, and many more. Electrical engineers work in all phases of technological programs. They are involved from the conception of the basic ideas through design, fabrication, verification, manufacturing, and marketing of the final product.

Computer engineering represents perhaps the most sought-after professional component of an engineering team which develops the technological possibilities inherent in the design, construction, and operation of computer systems. The computer engineer performs a wide variety of tasks involving hardware, software, peripherals, computer-controlled systems, and hardware-software integration, as well as computer applications in the multitude of areas listed above.

Both electrical engineering and computer engineering are broad-based engineering disciplines that provide for a wide range of career choices within the engineering field as well as providing an excellent basis for careers in such diverse areas as business, law, and medicine.

The electrical engineering curriculum is designed to provide an understanding of basic electrical engineering principles with emphasis on the development of problem solving skills. The computer engineering curriculum draws from software courses taken in computer science and hardware related courses taken from Electrical and Computer Engineering, culminating in the integration of hardware and software in systems design. An extensive laboratory experience is integrated with the classroom work to assure that the student develops a working knowledge of the fundamentals. Upper level courses integrate the knowledge base with current technology and computational tools resulting in a graduate capable of making a contribution to the engineering profession by either entering the work force or pursuing a graduate education.

## Faculty

Eric Balster, Chairperson

Professors Emeriti: Evers, Kee, Loomis, Moon, Rogers, Scarpino, Thiele, Williamson

Professors: Asari, Balster, Chatterjee, Chodavarapu, Duncan, Hardie, Hirakawa, Ordonez, Penno, Subramanyam, Taha

Associate Professors: Cao, Daniels, Neidhard-Doll, Ratliff

Assistant Professor: Ye

Adjunct Professors: Aspiras, Atahary, Barrera, Bogle, Browning, Diskin, Djaneye-Boundjou, Evans, Grote, Kaufman, Kebede, Kladitis, Kumar, Lai, Malas, McGuinness, Narayanan, Ouchen, Sargent, Shin, Skeans, Varney, Watson, Wetzels, Wung, Yakopcic, Zhang

## Bachelor of Electrical Engineering (ELE) minimum 134 hours

### Common Academic Program (CAP) <sup>1</sup>

First-Year Humanities Commons <sup>2</sup>	12	cr.	hrs.
HST 103 The West & the World			
REL 103 Introduction to Religious and Theological Studies			
PHL 103 Introduction to Philosophy			
ENG 100 Writing Seminar I <sup>3</sup>			
Second-Year Writing Seminar <sup>4</sup>	0-3	cr.	hrs.
ENG 200 Writing Seminar II			
Oral Communication	3	cr.	hrs.
CMM 100 Principles of Oral Communication			
Mathematics	3	cr.	hrs.
Social Science	3	cr.	hrs.
SSC 200 Social Science Integrated			
Arts	3	cr.	hrs.
Natural Sciences <sup>5</sup>	7	cr.	hrs.
Crossing Boundaries	up to 12	cr.	hrs.
Faith Traditions			
Practical Ethical Action Inquiry <sup>6</sup>			
Integrative			
Advanced Study			
Philosophy and/or Religious Studies (6 cr. hrs.)			
Historical Studies (3 cr. hrs.) <sup>7</sup>			
Diversity and Social Justice <sup>8</sup>	3	cr.	hrs.
Major Capstone <sup>9</sup>	0-6	cr.	hrs.

<sup>1</sup> The credit hours listed reflect what is needed to complete each CAP component. However, they should not be viewed as a cumulative addition to a student's degree requirements because many CAP courses are designed to satisfy more than one CAP component (e.g., Crossing Boundaries and Advanced Studies) and may also satisfy requirements in the student's major.

- <sup>2</sup> May be completed with ASI 110 and ASI 120 through the Core Program.
- <sup>3</sup> May be completed with ENG 100A and ENG 100B, by placement.
- <sup>4</sup> May be completed with ENG 114 or ENG 198 or ASI 120.
- <sup>5</sup> Must include two different disciplines and at least one accompanying lab.
- <sup>6</sup> U.S. History AP and CLEP credit will not satisfy this requirement.
- <sup>7</sup> May be completed with ASI 110 and ASI 120 through the Core Program. U.S. History AP and CLEP credit will not satisfy this requirement.
- <sup>8</sup> May not double count with First-Year Humanities Commons, Second-Year Writing, Oral Communication, Social Science, Arts, or Natural Sciences CAP components, but may double count with courses taken to satisfy other CAP components and/or courses taken in the student's major.
- <sup>9</sup> The course or experience is designed by faculty in each major; it may, or may not, be assigned credit hours.

### Major Requirements

CHM 123	General Chemistry	3
CPS 150	Algorithms & Programming I	4
ECE 101	Introduction to Electrical & Computer Engineering II	0
ECE 201	Circuit Analysis	3
ECE 201L	Circuit Analysis Laboratory	1
ECE 203	Introduction to MATLAB Programming	1
ECE 204 & 204L	Electronic Devices and Electronic Devices Laboratory	4
ECE 215 & 215L	Introduction to Digital Systems and Digital Systems Laboratory	4
ECE 300	Professional Development Seminar II	0
ECE 303 & 303L	Signals & Systems and Signals & Systems Laboratory	4
ECE 304 & 304L	ELECTRONIC SYSTEMS and Electronic Systems Laboratory	4
ECE 314 & 314L	Fundamentals of Computer Architecture and Fundamentals of Computer Architecture Laboratory	4
ECE 332	Electromagnetics	3

<sup>1</sup> Any course 300 level and above in ECE

<sup>2</sup> Select from list approved by the Department of Electrical and Computer Engineering.

## Concentration in Electrical Energy Systems (ENS)

The Electrical Energy Systems Concentration will prepare our Electrical and Computer Engineering students in all aspects of Electrical Energy Systems including generation, transmission, distribution, utilization, and storage, as well as enabling technologies for the smart grid.

Required ECE courses:

ECE 316	Introduction to Electrical Energy Systems	3
or ECE 499	Special Problems in Electrical & Computer Engineering	
ECE 414	Electromechanical Devices	3
ECE 471	Contemporary Power Systems & the Smart Grid	3
<b>Select one course from:</b>		<b>3</b>
ECE 472	Smart Grid Technologies	

MEE 473	Renewable Energy Systems	
<b>Total Hours</b>		<b>12</b>

## Concentration in Electro-Optics (EOP)

The departments of Electrical and Computer Engineering and Physics, with the support of the Electro-Optics Program at University of Dayton, offers an undergraduate concentration in Electro-Optics. This multidisciplinary concentration is open to Electrical Engineering, Computer Engineering and Physics undergraduates with appropriate prerequisite background. This concentration will enable students to pursue new coop opportunities and possible careers in photonics, and better prepare students to pursue new coop opportunities and possible careers in photonics and better prepare students who wish to pursue graduate degrees in the area of optics. All the courses listed below are approved as free technical electives for ECE undergraduate students.

ECE 443	Introduction to Electro-Optics	3
PHY 404	Physical Optics	3
<b>Select two courses from:</b>		<b>6</b>
EOP 501	Fundamentals of Optical Design	
EOP 502	Light and Matter Interaction	
EOP 505	Introduction to Lasers	
EOP 506/ ECE 573	Photonic Devices & Systems	
EOP 513/ ECE 572	Linear Systems & Fourier Optics	
EOP 514/ ECE 574	Guided-Wave Optics	

<b>Total Hours</b>		<b>12</b>
--------------------	--	-----------

## Concentration in Robotics (ROB)

<b>Robotics (CPE Majors)</b>		<b>15</b>
ECE 415	Control Systems	3
ECE 416	Introduction to Industrial Robotic Manipulators	3
ECE 447	Digital Control Systems	3
<b>Select two courses from:</b>		<b>6</b>
CPS 480	Artificial Intelligence	
ECE 414	Electromechanical Devices	
ECE 444	Advanced Digital Design	
ECE 445	Signal Processing	
MEE 321	Theory of Machines	
MEE 434	Mechatronics	
MEE 438	Robotics & Flexible Manufacturing	

<b>Robotics (ELE Majors)</b>		<b>12</b>

		<b>18</b>	<b>17</b>

## Minor in Computer Systems (COS)

This minor is open to chemical, civil, and mechanical engineering majors, and other students with appropriate prerequisite background who receive permission from the ECE Department Chairperson. The program builds strength in the area of computer systems and digital design, with emphasis on computer hardware.

<b>Computer Systems (non-MEE majors)</b>		<b>16</b>
CPS 150	Algorithms & Programming I	4
or ECE 444	Advanced Digital Design	
ECE 215 & 215L	Introduction to Digital Systems and Digital Systems Laboratory	4
ECE 314 & 314L	Fundamentals of Computer Architecture and Fundamentals of Computer Architecture Laboratory	4
EGR 203	Electrical & Electronic Circuits	3
EGR 203L	Electrical and Electronic Circuits Lab	1
<b>Computer Systems (MEE majors)</b>		<b>15</b>
CPS 150	Algorithms & Programming I (or equivalent)	4

## Minor in Signals and Systems (SAS)

This minor is open to chemical, civil, and mechanical engineering majors, and other students with appropriate prerequisite background who receive permission from the ECE Department Chairperson. The program provides the essential background in signals and systems theory including continuous and discrete systems. An advanced course is selected by the students to allow them to specialize in controls or signal processing.

ECE 201L	Circuit Analysis Laboratory	1
ECE 203	Introduction to MATLAB Programming	1
ECE 303 & 303L	Signals & Systems and Signals & Systems Laboratory	4
ECE 334	Discrete Signals & Systems	3
ECE 415	Control Systems	3
or ECE 445	Signal Processing	
ECE 201	Circuit Analysis	3
<b>Total Hours</b>		<b>15</b>

<b>Third Year</b>			
<b>Fall</b>	<b>Hours</b>	<b>Spring</b>	<b>Hours</b>

## Courses

### ECE 101. Introduction to Electrical & Computer Engineering II. 0 Hours

Introduction to electrical and computer engineering faculty, facilities, and curriculum. Career opportunities in electrical and computer engineering and areas of specialization are discussed. Second semester seminar.

### ECE 201. Circuit Analysis. 3 Hours

Principles of linear circuit analysis and problem solving techniques associated with circuits containing both passive and active components. Includes analysis of linear circuits with direct current (DC) and alternating current (AC) excitation, as well as a study of transient behavior. Course includes an additional mandatory supervised weekly problem session. Prerequisite(s): MTH 168 and sophomore status. Corequisite(s): ECE 201L.

### ECE 201L. Circuit Analysis Laboratory. 1 Hour

Laboratory course stressing experimental techniques, laboratory reporting, safety, and instrumentation. Experimental investigation of linear circuit component behavior and the DC, AC, and transient response of linear circuits. Corequisite(s): ECE 201 or EGR 203.

### ECE 203. Introduction to MATLAB Programming. 1 Hour

MATLAB system and development environment, vector and matrix operations using MATLAB, linear algebra and calculus using MATLAB, MATLAB graphics, flow control, symbolic math toolbox. Prerequisite(s): (CPS 132 or CPS 150) or equivalent.

### ECE 204. Electronic Devices. 3 Hours

Study of the terminal characteristics of electronic devices and basic single stage amplifier configurations using bipolar junction transistors and field-effect transistors. Analysis of the devices includes a qualitative physical description, volt-ampere curves, and the development of small- and large-signal equivalent circuit models. Prerequisite(s): EGR 203 or ECE 201. Corequisite(s): ECE 204L.

### ECE 204L. Electronic Devices Laboratory. 1 Hour

Laboratory investigation of electronic devices: diodes, bipolar junction transistors, field-effect transistors and operational amplifiers. Prerequisites: ECE 201 or EGR 203. Corequisites: ECE 204.

### ECE 215. Introduction to Digital Systems. 3 Hours

Introduction to binary systems, logic circuits, Boolean algebra, simplification methods, combinational circuits and networks, programmable logic devices, flip flops, registers, counters, memory elements, and analysis and design of sequential circuits. Corequisites: (EGR 203 or ECE 201) and ECE 215L.

### ECE 215L. Digital Systems Laboratory. 1 Hour

Laboratory investigation of digital logic circuits and systems covered in ECE 215. Logic gate characteristics; combinational logic design and analysis; latches and flip-flops; synchronous and asynchronous sequential logic; simple digital systems. Experiments include design and analysis of digital systems using breadboarding, FPGA boards, modeling and simulation tools, hardware description languages, and logic synthesis tools. Corequisites: (ECE 201 or EGR 203) and ECE 215.

**ECE 300. Professional Development Seminar II. 0 Hours**

Junior level professional development seminar. Presentations on contemporary and professional engineering subjects by students, faculty, and engineers in active practice. The seminar addresses topics in key areas that complement traditional courses and prepare distinctive graduates, ready for life and work. Registration required for all junior ECE students. Prerequisite(s): EGR 200 or COP 200.

**ECE 303. Signals & Systems. 3 Hours**

Mathematical framework associated with the analysis of linear systems including signal representation by orthogonal functions, convolution, Fourier and Laplace analysis, and frequency response of circuits and systems. Prerequisites: (ECE 201 or EGR 203) and (ECE 203 or MEE 114L). Corequisites: MTH 219 and ECE 303L.

**ECE 303L. Signals & Systems Laboratory. 1 Hour**

Laboratory investigation of signals and systems including signal decomposition, system impulse response, convolution, frequency analysis of systems, and filter design and realization. Prerequisites: (ECE 201 or EGR 203) and (ECE 203 or MEE 114L). Corequisites: ECE 303.

**ECE 304. ELECTRONIC SYSTEMS. 3 Hours**

Study of cascaded amplifiers, feedback amplifiers, linear integrated circuits, and oscillators including steady state analysis and analysis of frequency response. Prerequisites: ECE 204. Corequisites: ECE 303 and ECE 304L.

**ECE 304L. Electronic Systems Laboratory. 1 Hour**

Design, construction and verification of multistage amplifiers, differential amplifiers, feedback amplifiers, passive and active filters, and oscillators. Prerequisites: ECE 204. Corequisites: ECE 303 and ECE 304.

**ECE 314. Fundamentals of Computer Architecture. 3 Hours**

Study of computer systems organization, representation of data and instructions, instruction set architecture, processor and control units, memory devices and hierarchy, I/O devices and interfacing peripherals, high- to low-level language mapping, system simulation and implementation, applications and practical problems. Prerequisite(s): CPS 150; ECE 215. Corequisite(s): ECE 314L.

**ECE 314L. Fundamentals of Computer Architecture Laboratory. 1 Hour**

Laboratory investigation of digital computer architecture covered in ECE 314. Computer sub-systems such as central processing units, control units, I/O units, and hardware/software interfaces will be experimentally considered. Simulation and implementation will be used to study applications and practical problems. Prerequisites: ECE 215 and CPS 150. Corequisites: ECE 314.

**ECE 316. Introduction to Electrical Energy Systems. 3 Hours**

A broad introduction to electric energy concepts. Generation, transmission, distribution, and utilization of electric energy. Renewable energy, three phase systems, transformers, power electronics, motors and generators. Contemporary topics. Prerequisite(s): ECE 201 or EGR 203 or equivalent.

**ECE 332. Electromagnetics. 3 Hours**

Study of vector calculus, electro- and magneto-statics, Maxwell's equations, and electromagnetic plane waves and their reflection and transmission from discontinuities. Prerequisites: PHY 206, MTH 218.

**ECE 333. Applied Electromagnetics. 3 Hours**

Electromagnetic theory applied to problems in the areas of waveguides, radiation, electro-optics and electromagnetic interference and electromagnetic compatibility. Prerequisites: ECE 332, PHY 232.

**ECE 334. Discrete Signals & Systems. 3 Hours**

Introduction to discrete signals and systems including sampling and reconstruction of continuous signals, digital filters, frequency analysis, the z-transform, and the discrete Fourier transform. Prerequisite(s): ECE 303.

**ECE 340. Engineering Probability & Random Processes. 3 Hours**

Axiomatic probability, derived probability relationships, conditional probability, statistical independence, total probability and Bayes' Theorem, counting techniques, common random variables and their distribution functions, transformations of random variables, moments, autocorrelation, power spectral density, cross correlation and covariance, random processes through linear and nonlinear systems, linear regression, and engineering decision strategies. Prerequisites: MTH 218. Corequisites: ECE 303.

**ECE 398. Multidisciplinary Research & Innovation Laboratory. 1-6 Hours**

Students participate in 1.) selection and design, 2.) investigation and data collection, 3.) analysis, and 4.) presentation of a research project. Research can include, but is not limited to, developing an experiment, collecting and analyzing data, surveying and evaluating literature, developing new tools and techniques including software, and surveying, brainstorming, and evaluating engineering solutions and engineering designs. Proposals from teams of students will be considered.

**ECE 400. Professional Development for Seniors. 0 Hours**

Career planning for electrical and computer engineering majors. The job search process, resume preparation, the job interview, professional development. Required of all electrical and computer engineering majors in their junior or senior year. Prerequisites: ECE 300.

**ECE 401. Communication Systems. 3 Hours**

Study of amplitude, angle, pulse, and digital communication systems including generation, detection, and analysis of modulated signals and power, bandwidth, and noise considerations. Prerequisites: ECE 304. Corequisites: ECE 340 and ECE 401L.

**ECE 401L. Communication Systems Laboratory. 1 Hour**

Design, fabrication, and laboratory investigation of modulators, detectors, filters, and associated communication components and systems. Prerequisite(s): ECE 304. Corequisite(s): ECE 401.

**ECE 402. Power Electronics. 3 Hours**

ECE 402 is a course addressing the power electronic circuit solutions and controls for the emerging energy conversion systems. It will include the applications of such power circuits for renewable energy sources (fuel cell, solar, wind), electric vehicles and airplanes, and power supplies like wireless charger etc. The course introduces the characteristics of different power semiconductor devices and their application to power conversion area, different types of electric power converters topologies and controls like ac-dc rectifiers, dc-dc converters, and dc-ac inverters. Prerequisites: ECE 304.

**ECE 414. Electromechanical Devices. 3 Hours**

Properties and theory of electromechanical devices: nonlinear electromagnetic actuators; rotating machine analysis; field and circuit concepts and direct current, synchronous, and induction machines: special-purpose machines and fractional horsepower machines. Prerequisite(s): ECE 316 or equivalent.

**ECE 415. Control Systems. 3 Hours**

Study of mathematical models for control systems and analysis of performance characteristics and stability. Design topics include pole-placement, root locus, and frequency domain techniques. Prerequisite(s): ECE 303.

**ECE 416. Introduction to Industrial Robotic Manipulators. 3 Hours**

Topics include homogeneous transformations, direct and inverse kinematics, trajectory generation, and selected topics of robot vision. Prerequisite(s): ECE 303.

**ECE 420. The Internet of Things. 3 Hours**

Introduction to the multi-disciplinary topic of Internet of Things (IoT), a blend of engineering and science. The course begins with a fundamental technical understanding of the IoT architecture. From this foundation, students experience hands-on labs in a team environment with theoretical justification. The applied work features environmental sensor networking with geospatial data. Each surface area in IoT is explored from sensors and embedded devices to protocols and virtual servers highlighted by current trends within IoT. Lastly, the history, software and influential people will be discussed to provide class context. Ultimately, students scaffold their knowledge through a series of labs, team challenges and supporting lectures to create a final business proposal for a real client IoT value proposition.

**ECE 431L. Multidisciplinary Design I. 2 Hours**

Application of engineering fundamentals to sponsored multidisciplinary-team design projects. In a combination of lecture and lab experiences, students learn the product realization process and project management. Product realization topics include idea generation, proposal development, design specifications, conceptualization and decision analysis. Project management topics include cost estimation and intellectual property management. Design projects progress to the proof of concept and prototype development stages. Prerequisites: MEE students: EGM 303, MEE 321, and (MEE 344 or MEE 478 or RCL 578, or MEE 401 or MEE 409), ECE students: ECE 304 or ECE 314.

**ECE 432L. Multidisciplinary Design II. 3 Hours**

One hour lecture and five hours of lab per week. Detailed evaluation of the Product Realization Process focusing on conceptual design, embodiment design, final design and prototyping is taught. Analysis of the design criteria for safety, ergonomics, environment, cost and sociological impact is covered. Periodic oral and written status reports are required. The course culminates in a comprehensive written report and oral presentation. Prerequisites: MEE majors: MEE 431L; CPE majors: ECE 431L and (2 of the following: ECE 334, CPS 444, ECE 340, CPS 356, ECE 444); ELE majors: ECE 431L and (2 of the following: ECE 401, ECE 415, ECE 333, ECE 334, ECE 340).

**ECE 441. Integrated Circuit Electronics. 3 Hours**

Integrated circuit design, construction and verification including the study of biasing, multistage differential and analog power amplification, and computer assisted design tools for "on-chip" design and layout. Prerequisite(s): ECE 304.

**ECE 443. Introduction to Electro-Optics. 3 Hours**

Introductory overview of electro-optics starting with Maxwell's equations and leading to lasers, holography, and other timely applications. Prerequisite(s): ECE 332.

**ECE 444. Advanced Digital Design. 3 Hours**

An introduction to modern digital hardware logic design using a hierarchical system approach including top-down development process. An introduction to alternative design implementation forms including hardware description languages (HDLs) for the design of simple and complex combinatorial logic circuits and sequential logic designs with finite state machines. Good HDL coding practices such as readability, re-configurability, and efficient execution are emphasized along with the use of programmable logic circuits including Field-Programmable Gate Arrays (FPGAs). Prerequisite(s): ECE 215.

**ECE 445. Signal Processing. 3 Hours**

Selected topics in digital signal and image processing with design projects. The design projects are determined by the instructor and may come from a variety of signal processing applications including medical image processing, video processing, computer vision, statistical signal processing, speech processing, radar signal processing, etc. Prerequisite(s): ECE 334.

**ECE 446. Microelectronic Systems Design. 3 Hours**

Basic integrated circuit design concepts, system layout, application of design methodology, the fabrication process, manufacturing limitations of the design process, and CAD/CAE utilization to realize the design process. Prerequisite(s): ECE 304.

**ECE 447. Digital Control Systems. 3 Hours**

Analysis and synthesis of feedback control systems including digital compensators. Topics include performance and stability analysis, regulator and servomechanism design using time and frequency domain methods, and digital implementation case studies. Prerequisite(s): ECE 415; ECE 334 or equivalent.

**ECE 448. Fiber Optic Communications. 3 Hours**

General light guidance principles; ray optics; dispersion; single mode, multimode, and graded index fibers; basic laser and LED source principles; photodetectors; error probability in digital optical systems; rise time analysis; loss budget analysis; local area networks and long haul communication links. Prerequisite(s): ECE 333. Corequisites: ECE 401.

**ECE 449. Computer Systems Engineering. 3 Hours**

An introduction to advanced computer architecture and computer systems design. Topics include: exploration of principle architecture features of modern computers, pipelining, memory hierarchy, I/O devices, interconnection networks, introduction to parallel and multiprocessor systems, and the use of hardware description languages (HDLs) in system implementation. Prerequisite(s): ECE 314 and CPS 356.

**ECE 450L. Projects Laboratory. 1-3 Hours**

Project-oriented laboratory applying engineering skills in the design, development, and demonstration of electrical and electronic systems. Prerequisite(s): Permission of project advisor.

**ECE 465. Fundamentals of Solid-State Batteries. 3 Hours**

Introduction to the fundamental of solid-state, safe, durable, batteries, including working principles of a battery, state-of-the-art battery (Li-ion battery based on liquid-state electrolytes- advantages/disadvantages), battery safety, need for a safe battery system for low-high power applications (electric vehicles / unmanned-/manned aircrafts, space vehicles, etc.), different design of solid-state batteries (planner-stacked, 3 dimensional, etc.), engineering the structural battery (dual functionality system that can carry mechanical load and store energy), characterization methods to evaluate structure / electrical / electrochemical properties of all solid-state battery materials (cathode, anode, electrolytes), interfaces (electrodes/electrolyte), and electrical/ electrochemical testing of complete battery cells. Also, electrical test methods to evaluate solid-state Li-ion battery (including structural battery) performances, etc.), and understanding degradation mechanism of solid-state battery systems (including structural battery) will be discussed. Prerequisite(s): ECE 304 or equivalent.

**ECE 466. Fundamentals of Hybrid Electrochemical Power. 3 Hours**

Introduction to the fundamental of hybrid electrochemical power (battery + capacitor + fuel cell – integrated systems) including working principles of battery, capacitor, lithium-ion capacitor, and fuel cell, advantages/disadvantages, necessity to hybridize battery / fuel cell / capacitor, electrical hybridization methods, electrochemical testing of hybrid power systems, degradation mechanism, and applications. Hybrid electrochemical power is highly desirable to meet requirements for wide range products (powering electronic gadget to transportation vehicles to space vehicles) requiring low to high power/energy, cycle-life, fast/slow charge/discharge, etc. Prerequisite(s): ECE 304 or equivalent.

**ECE 471. Contemporary Power Systems & the Smart Grid. 3 Hours**

Introduction to electrical power systems; generation, transmission and utilization; power system analysis; power system control; energy management; and an introduction to smart grid technologies. Prerequisite(s): ECE 316 or equivalent.

**ECE 472. Smart Grid Technologies. 3 Hours**

An introductory study of enabling technologies and energy issues necessary for full realization of the Smart Grid. Course topics vary. This course can be taken multiple times. Prerequisite(s): ECE 471 or equivalent.

**ECE 477. Artificial Neural Networks. 3 Hours**

This course introduces the fundamental concepts, mathematical models, design architectures, and learning algorithms of artificial neural networks (ANNs) which learn from examples. ANNs are biologically inspired systems that mimic the structural and perceptual behavior of human brain. The main topics include the structure of an artificial neuron, single layer perceptron and multi-layer perceptron, delta rule and back-propagation learning, radial basis function neural network, support vector machines, recurrent neural networks, auto-associative and hetero-associative memories, adaptive resonance theory, and self-organizing feature map. Prerequisites: (ECE 203 or MEE114L), ECE 334.

**ECE 486. Computer Networks. 3 Hours**

Introduction to the fundamental of computer networks, including the Open Systems Interconnection reference model, transmission media, medium access protocol, data link protocols, routing, congestion control, applications, and network security. Recommended prerequisite: ECE303.

**ECE 487. Wireless Security. 3 Hours**

Wireless security is a very important topic and attracting more and more attention from industry, research, and academia. This course gives a comprehensive overview on the recent advances in wireless network and system security. It will cover security issues and solutions in emerging wireless access networks and systems as well as multi-hop wireless networks. Prerequisites: ECE 203 or MEE 114L.

**ECE 490. Biomedical Engineering and Healthcare Electronics. 3 Hours**

This survey course will introduce students to the interdisciplinary field of Biomedical Engineering. Students will learn about the application of electrical and computer engineering in healthcare solutions. This course is project oriented, covering topics such as: bioethics, anatomy and physiology, biomimetics, skeletal and cardiac biomechanics, biomaterials & prosthetics, biosensors, bioinstrumentation, neuroscience and traumatic brain injury, rehabilitation engineering/assistive technology, biomedical modeling and medical additive manufacturing. Students may have the opportunity to attend industry site visits with internal and external partners in the medical field to apply knowledge learned in the classroom to real-world experiences. Prerequisites: (ECE 201 or EGR 203) or (MEE 298 or MEE 205) or equivalent.

**ECE 491. Medical Imaging. 3 Hours**

This course will introduce students to the field of Medical Imaging. Students will learn about the different modalities (Ultrasound, X-ray, CT, MRI, Nuclear Medicine) utilized in healthcare and gain an understanding about which techniques are most appropriate for various medical pathology through open-ended clinical case studies. Students may have the opportunity to attend industry site visits with internal and external community partners in the medical field through collaboration with a local community hospital to apply knowledge learned in the classroom to real-world experiences. This course is project oriented, covering topics such as bioinstrumentation, medical image processing, medical additive manufacturing and sustainable healthcare solutions for developing countries. Prerequisites: (ECE 201 or EGR 203 or MEE 205 or equivalent) and (ECE 203 or MEE114L or equivalent).

**ECE 493. Honors Thesis. 3 Hours**

Selection, design, investigation, and completion of an independent, original research study resulting in a document prepared for submission as a potential publication and a completed undergraduate thesis. Restricted to students in University Honors Program.

**ECE 494. Honors Thesis. 3 Hours**

Selection, design, investigation, and completion of an independent, original research study resulting in a document prepared for submission as a potential publication and a completed undergraduate thesis. Restricted to students in University Honors Program. Prerequisite(s): ECE 493.

**ECE 498. Multidisciplinary Research & Innovation Laboratory. 1-6 Hours**

Students participate in 1.) selection and design, 2.) investigation and data collection, 3.) analysis, and 4.) presentation of a research project. Research can include, but is not limited to, developing an experiment, collecting and analyzing data, surveying and evaluating literature, developing new tools and techniques including software, and surveying, brainstorming, and evaluating engineering solutions and engineering designs. Proposals from teams of students will be considered.

**ECE 499. Special Problems in Electrical & Computer Engineering. 1-6 Hours**

Particular assignments to be arranged and approved by the department chairperson.
